

Wax Paper Resist

Use wax paper to make an interesting background for your cards

Supplies

Wax Paper

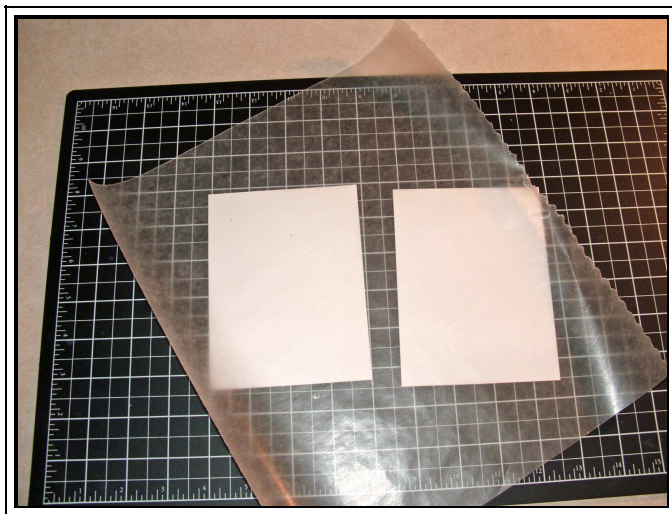

Glossy Card Stock

Iron

Ink

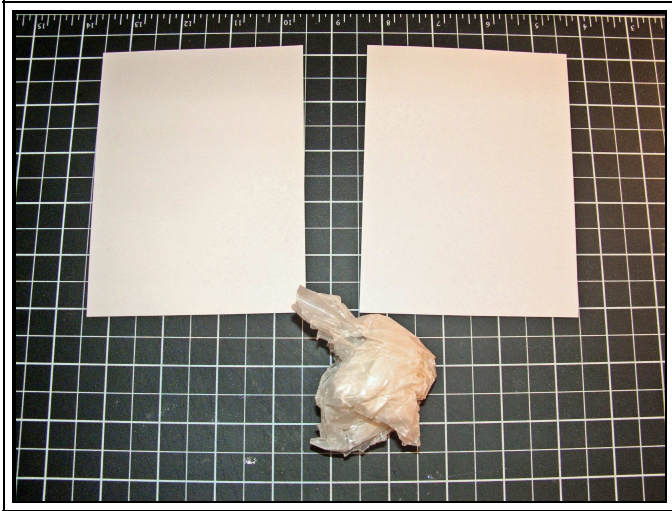

Brayer

Scratch paper

Cut two pieces of glossy cardstock

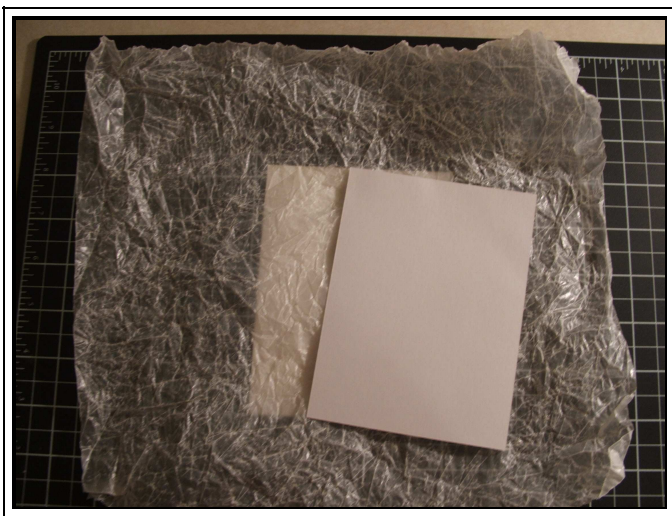

Tear off a piece of wax paper large enough to cover your background pieces

Begin by crumpling the wax paper into a small ball several times

Unfold and smooth the wax paper

Lay the first piece of card stock glossy side up and place the wax paper over it

Place the second piece of card stock glossy side down on top of the wax paper

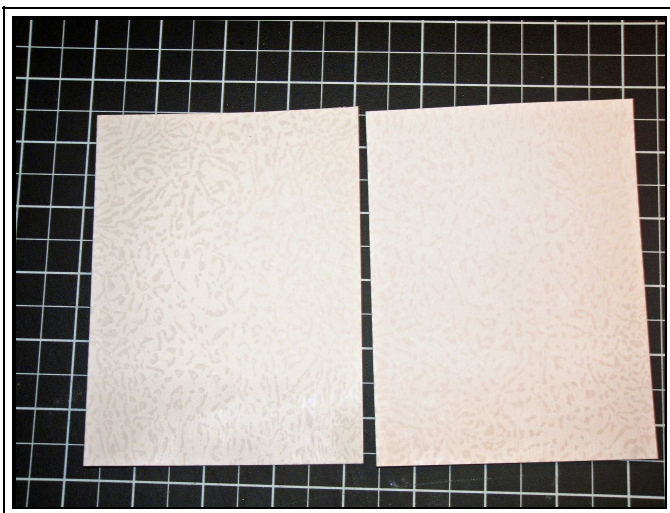

Place the second piece of card stock directly over the bottom piece of card stock with the wax paper in between

Place scrap paper over and under the wax paper sandwich to protect your ironing board cover and your Iron from melting wax

With the iron on medium heat run over the cardstock pieces several time to melt the wax on the paper

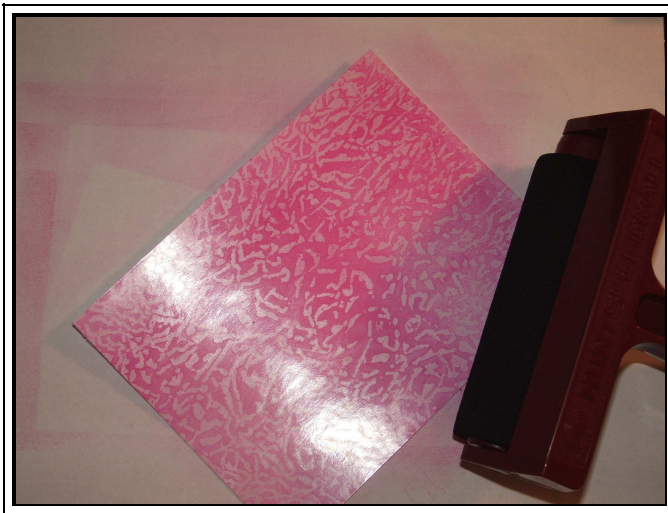

Allow to cool a few minutes and then remove the wax paper and the scrap paper and discard

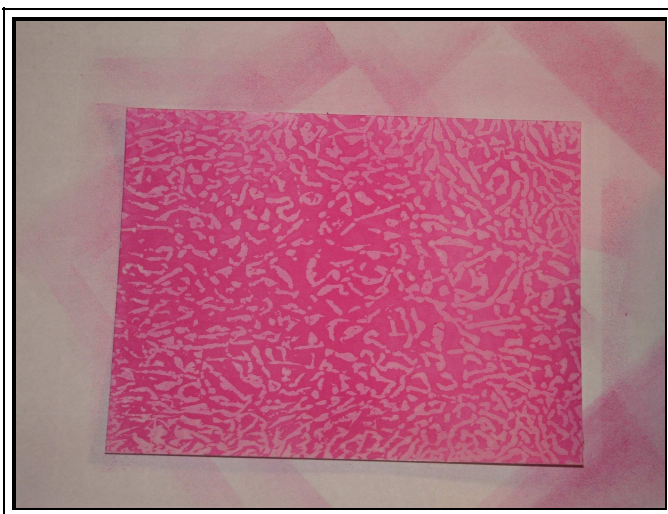

You will be left with two pieces of background paper with a distinct relief pattern

Load your brayer with ink and brayer over the card stock

Continue adding ink with the brayer until you have achieved the desired result

You will be left with a great piece of background paper

Use a piece of tissue to wipe away the wax residue and any excess ink

Your pattern will become even more distinct as the white shows through

Use your background piece to create a finished card!!
